Shizuoka University Library

The Library: at the center of University life

To the new university students, welcome! For sure you have many experiences using a library before coming to the university. The university library is a place filled with knowledge and ideas gained by our predecessors from all times and places. Aside from being a place where you can study, review, and write reports, it is also a place where you can obtain various kinds of information. Although we are at an age when the most common way to access information is through the Internet, not all information from the Internet is reliable. Thus, you need to be able to properly use and distinguish between quick information from the Internet and systematized and reliable information contained in published materials. This library enables you to access and use both types of information correctly.

We hope that this booklet will help you learn about the services that the library offers and how to use them. Always bring it with you to serve as your guide in making the library a useful part of your university life. The library is open from early in the morning to late at night and you can use it freely anytime, any useful way you want. We hope that through this booklet, more people can become expert library users.

◆ Research article search

Reading articles related to your research topic is important because basically all research progress is published in academic journals. The particular research articles, however, are not searchable through OPAC and the Shizuoka Prefectural Central Library; you need to search them in an article search database.

■ CiNii Articles Search

CiNii Articles is one of the databases maintained by the National Institute of Informatics (NII) and is for academic research articles published in Japan. You can view full articles and abstracts and find related literature.

Example: Search articles with the keywords 「カワヅザクラ」「開花」.

伊豆半島を代表する早咲きザクラであるカワヅザクラの南伊豆地域における開花期を調査し、開花日と気温との関係について検討した。4年間の調査で約2週間の違いがあった。開花期は2分咲きから満開までが平均18日と比較的短い。年次間差では、11月下旬から12月上旬にある開花前51〜70日以降の気温との相関が高かった。河津町田中にあるカワヅザクラの開花状況には10年を差が確認され、地域内で長期継続して開花を続ける性質が認められた。

Kawazu-zakura' (Prunus lannesiana Wils.) in Minamiizu. The flowering time of this cherry tree was investigated in the Minamiizu area of Izu Peninsula. The flowering time was examined for 4 years, and the difference was about 2 weeks. The flowering time was from the first flowering to full bloom for an average of 18 days, which is relatively short. The inter-annual difference was that the correlation between the flowering time and the temperature after 51 to 70 days after the first flowering was high. It was confirmed that there was a 10-year difference in the flowering status of Kawazu-zakura in the region, and it was recognized that it has a nature of continuing to bloom in the region.
