GEOSCIENCE REPORTS OF SHIZUOKA UNIVERSITY

48

-
- Displacement fields around the Fuji and Izu-Oshima volcanoes based on InSAR analysis
of the Sentinel-1 satellite data *Haruka FUKUDA and Yuta MITSUI* 1
- Numerical model experiment of grain shear events based on Distinct Element Method:
Effects of initial condition and frictional coefficient *Shin'ichi OBA and Yuta MITSUI* 11
- Storm surge deposits associated with Typhoon 19 on October 12, 2019, at Ohya coast,
Shizuoka, Japan. *Akihisa KITAMURA* 17
- Kawagodaira Pumice from Upper Holocene at Nakazato, Yaizu City, central Japan.
Akihisa KITAMURA and Shoya HIRATA 23
- Examination of storm surge deposits in the muddy intertidal zone of Ena Bay, Miura Peninsula,
Kanagawa Prefecture, central Japan
Akihisa KITAMURA, Shiori HIKITA and Hiromi SAMEJIMA 27
- Early-Middle Pleistocene volcanism and tectonics of the Enrei Volcanic Field in the Utsukushigahara
area, Chu-Shin Highland, North Fossa Magna, central Japan — An example of forming process
of large-scale multiple cauldron —
Akira MIYASAKA and Ken-ichi KANO 37
- Preliminary report on the debris flow that occurred on July 3, 2021 in the Izuyama area,
Atami City, Shizuoka Prefecture.
Akihisa KITAMURA and Masayuki IKEDA 63
-

July 2021
